IV B.Tech II Semester Supplementary Examinations, July/August - 2017

CELLULAR AND MOBILE COMMUNICATION

(Electronics and Communication Engineering)

Time: 3 hours Max. Marks: 70

> Question paper consists of Part-A and Part-B Answer ALL sub questions from Part-A Answer any THREE questions from Part-B

systems? b) What are the various types of non-cochannel interference? c) Define the gain of an antenna and write the expression for it. d) Explain the advantages of cell sectorization over cell splitting. e) What is handoff? Describe its classification. f) List out the features of GSM. PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one.	[4] [3] [4] [4] [4] [3]
 b) What are the various types of non-cochannel interference? c) Define the gain of an antenna and write the expression for it. d) Explain the advantages of cell sectorization over cell splitting. e) What is handoff? Describe its classification. f) List out the features of GSM. PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	[4] [4] [4] [3]
d) Explain the advantages of cell sectorization over cell splitting. e) What is handoff? Describe its classification. f) List out the features of GSM. PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one.	[4] [4] [3]
e) What is handoff? Describe its classification. f) List out the features of GSM. PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one.	[4] [3]
PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one.	[3]
 PART-B (3x16 = 48 Marks) 2. a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	
 a) Why the shape of a cell is represented with hexagon? Explain with an example. b) Define the co-channel interference reduction factor and derive the expression for it. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	[8]
 b) Define the co-channel interference reduction factor and derive the expression for it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	[8]
 it. 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	
 3. a) Explain the effects of human made structures on mobile propagation. b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	
 b) Explain the functions of diversity receiver with the help of a neat diagram. 4. a) Explain how the interference is reduced by means of directional antennas. b) What are the different types of antennas used for mobile station? Explain any one. 	[8]
4. a) Explain how the interference is reduced by means of directional antennas.b) What are the different types of antennas used for mobile station? Explain any one.	[8]
b) What are the different types of antennas used for mobile station? Explain any one.	[8]
one.	[8]
5 a) Draw the diagram of frequency management short and explain different channels	[8]
, , , , , , , , , , , , , , , , , , , ,	
in cellular system.	[8]
b) Explain the non-fixed channel assignment technique in detail.	[4]
c) Explain how 'grouping' of channels is achieved.	[4]
6. a) What are the various handoff initiation techniques? Explain any one.	[8]
b) Define the dropped call rate and obtain the expression for it.	[8]
7. a) What are the various functional blocks in GSM architecture? Explain Network switching subsystem.	[8]
	[8]
